 Additional Information: [full citation](#), [abstract](#), [citations](#), [index terms](#)

We present the Stanford Parallel Applications for Shared-Memory (SPLASH), a set of parallel applications for use in the design and evaluation of shared-memory multiprocessing systems. Our goal is to provide a suite of realistic applications that will serve as a well-documented and consistent basis for evaluation studies. We describe the applications currently in the suite in detail, discuss some of their important characteristics, and explore their behavior by running them on a real multiprocess ...

D. Sriram, R. Joobhani

 January 1985 **ACM SIGART Bulletin**, Issue 91

 Full text available: [pdf\(8.79 MB\)](#)

 Additional Information: [full citation](#), [abstract](#)

The papers in this special issue were compiled from responses to the announcement in the July 1984 issue of the SIGART newsletter and notices posted over the ARPAnet. The interest being shown in this area is reflected in the sixty papers received from over six countries. About half the papers were received over the computer network.

Requester's Full Name: ANN THAI Examiner #: 79364 Date: 4/18/05
 Art Unit: 2161 Phone Number 302-26024 Serial Number: 09/086, 746
 Mail Box and Bldg/Room Location: 3021 Results Format Preferred (circle): PAPER DISK E-MAIL

If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: System & Method for Dynamic data Clustering
 Inventors (please provide full names): James M. Minor

Earliest Priority Filing Date: 11/9/01

For Sequence Searches Only Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.

- Cluster and force

- Density pattern.

(It's in IFW, please see claim 1).

[Comment on this article](#)

Abstract: The scaling ansatz of Hamilton et al. effectively extends the idea of self-similar scaling to initial power spectra of any generic shape. Applications of this ansatz have provided a semi-empirical analytical description of gravitational clustering which is extremely useful. This contribution examines the two theoretical ingredients that form the basis of these applications: self-similar evolution and the stable clustering hypothesis. A brief summary of work verifying self-similar scaling for... ([Update](#))

[Comment on this article](#)

Abstract: Simulations of interacting particles are common in science and engineering, appearing in such diverse disciplines as astrophysics, fluid dynamics, molecular physics and materials science. These simulations are often computationally intensive and so natural candidates for massively parallel computing. There are several commonly used methods for parallelizing many-body computations. The simplest approaches require all-to-all communication, an expensive communication step. The fastest methods... ([Update](#))

[Comment on this article](#)

Abstract: The explosive growth in the availability of information is overwhelming traditional information management systems. Although individual pieces of information have become easy to find, the larger context in which they exist has become harder to track. These contextual questions are ideally suited to visualization since the human visual system is remarkably adept at interpreting large quantities of information, and at detecting patterns and anomalies. The challenge is to present the information... ([Update](#))
